

# Lift the Science Off the Page: Medical Protocols for Periodontal Therapy

Periodontal disease pathogens infiltrate into the open wounds of the ulcerated sulcus, leading to tissue damage and destruction. Traditional non-surgical periodontal therapy has been only marginally effective in many cases, leading to frustration on the part of the practitioner and dissatisfaction on the part of the patient. Adapting medical wound care protocols can enhance healing, leading to more satisfied patients and more fulfilled clinicians.

See dental practice through a new lens  
- that of an oral wellness specialist.

**Suggested Audience:** Dentist, Hygienist, and Team  
**Suggested Format:** Full or Partial Day Workshops

## Course Objectives

- Discover medical wound care protocols
- Explore leading edge practices to employ worn care protocols in non-surgical periodontal therapy
- Illuminate the significance and challenges of oral biofilm

“Kathryn does a great job of incorporating information that is accurate and useful in your everyday life. You will not be disappointed with Kathryn at the front of the room!” –Ryan D. Rutar, RDH BSDH, MA, President-Elect, Nebraska Dental Hygienist's Association Institute
